New human stearoyl-CoA desaturase gene promoter, useful for treating a skin diseases (e.g. acne, psoriasis and rosacea), tumor diseases, leukemias, autoimmune diseases, allergies, arthritis, inflammations, or organ rejections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a human skin stearoyl-CoA desaturase (SCD) polypeptide. SCD is responsible for the production of unsaturated fatty acids, which are required for energy and lipid metabolism, membrane structure and signal transduction. The SCD polynucleotides and polypeptides are useful for diagnosing a skin
                                                                                                                    The present sequence is that of the N-terminal region of human stearcyl-CoA desaturase (SCD), encoded by the 5' region of the SCD coding sequence given in ABL5745. The present invention provides upromoter of the SCD gene and functional moieties, fragments and variants of it, as well as nucleic acid constructs and vectors that contain such sequences, and their uses. The promoter may be used for selective transgenic expression in various tissues such as the for selective transgenic expression in various tissues such as the skin for treating a Skin disease (e.g. acne, psoriasis and rosacea), tumnours, leukaemia, autoimmune diseases, allergy, arthritis, inflammation, organ rejection, graft versus host reaction, diseases of the blood coaquilation system, cardiovascular diseases, anaemia, infections, or damage to the central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid useful for diagnosing and treating human skin disorder comprises sequences encoding human stearoyl-CoA desaturase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse, skin, stearoyl-CoA desaturase, SCD; unsaturated fatty acid; skin disorder; skin cancer; hypertrichosis; hirsutism; acne; atopic dermatitis; alopecia; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                               ;

ö
disorder by an abnormal level of SCD expression. The polypeptide is useful for determining whether an agent increases or decreases the expression level or activity of human SCD in skin cells. Such compounds are useful for treating human skin disorders such as skin cancer, hypertrichosis and hirsutism which is characterized by an excess of SCD activity. The SCD polypeptides and polynucleotides are also useful for treating human skin disorders such as acne, atopic dermatitis and alopecia. The SCD polynucleotide is also useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The printed sequence listing for this specification was incomplete, terminating part way through SEQ ID NO 106. The remaining data was obtained from EPO data for an equivalent patent (EP1114862).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABB44606-ABB44623) or its variant or encoding nucleic acid
(ABA81990-ABA81995, ABA82016-ABA82032) with vulnerary and/or
dermatological activity for the diagnosis, prevention and treatment of
skin disorders and treatment in wound healing or for the identification
of pharmacologically active substances. The nucleic acids are useful in
gene therapy.

      δÃ
                                                                                                                    The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human mino additional and polynerices of the invention.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerse chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                   N S X S E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, oblymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantificating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical ensoration, for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human consistic anhouse data for this partner in any and any and any or the constant in any and a

                                                                                                              polypeptide (II) sequences. (I) is useful as hybridisation probes, or of powers chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of [II]. The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of [II] or to treat disease states involving (II). (II) is useful for generating antibodies against it detecting or
                                                                                                                                                                                                                                                                                                                                                                                     quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human with manner of the invention and application and produce other types of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention describes an isolated protein complex, comprising two proteins. The protein complex comprises: protein kinase MAPKAP-K3 and AmPLAB-K3 and AmPKAP-K3 and AmPLAB-K3 and AmPLAB-K3 and AmPLAB-K3 and AmPLAB-K3 and heat shock protein (AFP 692) MAPKAP-K3 and heat shock protein (AFP 692) MAPKAP-K3 and heat shock protein kinase (ERK3 and KIRABO934 (unknown function); ERK3 and cell cycle dependent kinase (CDK) 9; ERK3 and protein kinase (CLK; C'MAP-1 and Clathrin heavy chain; C'NAP-1 and Amphiphysin; C'NAP-1 and novel protein PN9109 or C'NAP-1 and KIAAL106 (unknown function) interactions. The protein complexes are useful for diagnosing physiological generative disorders, drug screening for agents that modulate the interaction of the proteins of the proteins. These physiological disorders include non-insulin dependent diabetes mellitus (NIDDM), neurodegenerative disorders (e.g. Alzheimer's disease), inflammatory diseases (e.g. rheumatoid arthritis and inflammatory bowel disorder) and other human disease such as atherosclerosis, cardiac hypertrophy and hypoxic brain injury. This sequence represents the clathrin heavy chain protein, residues 865-1170 of which binds to the balt protein centrosomal Nek-2 associated protein 1 (C'NAPI) (see ABK1313) in a yeast two-hybrid assay for discreation of claimed in claim 1 of the invention.
                                                                                                                                                                             MAPKAP-K3; AP-3 delta; APP-695; amyloid A4; Hsp8; heat shock protein 8; Li30; NY-REN-58; P38 Alpha; P38 Beta; ERK3; KIAA0934; CDK9; coell cycle dependent kinase 9; CLK; C-NB-L1; clathrin heavy chain; amphiphysin; PN9109; KIAA1106; neurodegenerative disorder; non-insulin dependent diabetes mellitus; NIDDM; Alzheimer's disease; inflammatory disease; rheumatoid arthritis; inflammatory bowel disorder; atherosclerosis; cardiac hypertrophy; hypoxic brain injury; yeast two-hybrid; signal transduction pathway; human; mitogen activated protein kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "This region binds the centrosomal Nek-2 associated protein I (C-NRAI) (see ABK1313), the bait protein in a yeast two-hybrid assay, producting a complex claimed in claim 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New protein complexes comprising protein-protein interactions (e.g. MAPKAP-K3/AP-3 delta or C-NAP-1/Clathrin RC), useful for diagnosing physiological generative disorders or screening drugs for these

in the specification). ABN15762 to ABN27252 encode the human ORFX in the specification). ABN15762 to ABN27252 encode the human ORFX associated with an ORFX associated with an ORFX-associated with an ORFX-associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the traatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic upus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying target proteins KaBB90790-ABB940161 for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using
        protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                            Gaps
bone degenerative disorders, or periodontal disease, and for gut
                                                                                                                                                                                          3;
                                                                                                                                                          Length 61;

The present invention relates to a new isolated polynucleotide comprising a sequence present in Lactobacillus rhamnosus strain RN01 and encoding a colypeptide capable of modifying the flavour, aroma, texture, nutritional and health benefits of milk-derived products, and/or survivability of microbes in dairy manufacturing processes. The polynucleotides are useful for improving the properties of microbes used in the manufacture of milk-cerived products such as cheeses, yogurt, fermented milk products, sour milks and buttermilk; in modifying the flavour, aroma, texture and health comparate benefits of milk-derived products and in increasing the survival of microbes during industrial fermentation processes. The bacteria may be used to increase resistance to enteric pathogens and anti-infection containing a cerivity, including treatment of rotavirus infection and infection and infection and infection and infection and infection of immune system modulation and treatment of auti-cancer and anti-undensess; immune system modulation and treatment of auti-cinforned disorders and allergies; treatment of allergic responses to foods; reduction of blood libids and prevention of heart disease, antihypertensive effect; processed in the process of the part of the parameter of infections, howel disorder plant.
                                                                                                                      Enzyme; flavour; aroma; texture; nutritional; dairy manufacture; therapy; fermentation process; anti-infection; rotavirus infection; heart disease; infantile diarrhoea; lactose digestion; anti-cancer; autoimmune disorder; anti-mutagenesis; immune system modulation; allergy; Helicobacter pylori; antihypertensive effect; urogenical infection; hepatic encephalopathy; bowel syndrome; endocarditis; transgenic microbe; peptidase; pep0.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or hepatic encephalopathy; treatment of inflammatory bowel disorder and irritable bowel syndrome; modulation of endocarditis; and for improved protein and carbohydrate utilization and conversion. The transgenic microbial population can be administered to a mammal as an anticarcinogenic agent. The present sequence is Lactobacillus rhamnosus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides and polypeptides from Lactobacillus rhamnosus, useful in e.g. improving the flavor, aroma, texture and health-related benefits of milk-derived products, or in increasing properties of microbes -

streptococcus/GBS (Streptococcus adalactiae) or group A streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS) (Streptococcus/GBS) (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antihilammatory activity. (I), nucleic acids encoding (I), ABNG6044-ABN71256 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment to r prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biogical sample. (I) is used to detect Streptococcus in a biogical sample. (I) are used to detect may be meningitis. Nucleic used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affility chromosocraphy, immunoassays, and distinguishing/identifying

Sequences ABP31028-ABP35561 represent 4534 novel human proteins designated ORF (open reading frame) 1-4534, and sequences ABN75054-8ABN36954 represent consequences at least 80% identical to the ORF1-ORF434 (collectively polypeptides at least 80% identical to the ORF1-ORF434 (collectively referred to as ORFX) proteins, polymoclectides at least 85% identical to referred to as ORFX) proteins, proteins, antibodies the recombinant production of ORFX proteins, antibodies polymuclectides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polymuclectides and polypeptides, methods of screening individuals for a predisposition to an operation, methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopoisals regulation, tissue growth, anglogenesis, activito or inhibin activity, chemotactic/ chamokinetic activity, immune modulation or inhibit activity, chemotactic/ chamokinetic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, or nucleic acids and antibodies may be used in the treatment of cancers,
                                                                                                                                      Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; dimune modulation; haematopolesis regulation; tessue growth; anglogenesis; activin; inhibin; chemocactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidiabetic; cytostatic; nootropic; entipsoriatic; antidiabetic; cytostatic; nootropic; cardiant; hypotensive; antitatherosclerotic; anticoagulant; thrombolytic; cardiant; hypotensive; antitatyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide.

neurological disorders such as pelipeps and Alzheimer's disease.

Cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, diseases such as diabetes mellitus, hypothyroidism, and cholesterol esterosteroge such as diabetes mellitus, hypothyroidism, and cholesterol esterosteroge diseases, and infectious diseases caused by viral, bacterial, tunged and other pathogens. ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous or transcripts, in the identification and cloning of homologous or transcripts, in genetic diagnosis, and in foreasic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases.

pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin protein sequence.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6441157
GENERAL INFORMATION:
APPLICANT: Singh, Mohan Bir;
APPLICANT: Snith, Penelope; and
APPLICANT: Knox, Robert Bruce
ITLE OF INVENTION: Protein Allergens of the Species
TITLE OF INVENTION: Cynodon Dactylon
NUMBER OF SEQUENCES: 45
CORRESPONDENCE ADDRESS:
ADDRESSEE: ImmuLogic Pharmaceutical Corporation
STREET: 610 Lincoln Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1; Mismatches

Patent No. 6214358
GENERAL INFORMATION
APPLICANT: Singh, Mohan Bir;
APPLICANT: Saith, Penelope; and
APPLICANT: Knox, Robert Bruce
TITLE OF INVENTION: Protein Allergens of the Species Cynodon
TITLE OF INVENTION: Dactylon
NUMBER OF SEQUENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSE: LAHIVE & COCKFIELD LLP
STREET: 28 State Street
CITY: BOSTON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 40; DB 4; Length 246;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Comment: Clathrin, the major protein component of coated pits and vesicles, is a trits carboxyl end. The heavy chains are also held together by noncovalent interacting; Ccomment: The amino end of the mature protein is blocked.
C; Superfamily: clathrin heavy chain

RESULT 2

vitellogenin II precursor - mummichog

C;Species: Fundulus heteroclitus (munmichog) C:Date: 11-Jan-2000 #sequence_revision 11-Jan-2000 #text_change 18-Feb-2000

C;Accession: T43144
R;LaFleur, G.J.; Hoch, K.L.; Denslow, N.; Byrne, B.M.; Wallace, R.A.
submitted to the EMBL Data Library, September 1996
A;Description: Derivation of oocyte and egg proteins from parental vitellogenins in 1

A; Reference number: Z22316

A; Accession: T43144 A; Status: preliminary; translated from GB/EMBL/DDBJ

A; Molecule type: mRNA A; Residues: 1.1687 <LAF> A; Cross-references: EMBL: V10826, NID:g1621358; PID:g1621359; PIDN:AAB17152.1 A; Experimental source: estrogen-induced liver C; Superfamily: vitellogenin

"Atomic structure of clathrin: a beta propeller terminal domain joins an alpha zigaza linker.";
Cell 95:563-573(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -I-FUNCTION: CLATHRIN IS THE MAJOR PROTEIN OF THE POLYHEDBAL COAT OF COATED PITS & VESICLES. TWO DIFFERENT ADAPTOR PROTEIN COMPLEXES LINK THE CLATHRIN LATTICE EITHER TO THE PLASMA MEMBRANE OR TO THE TRANS GOLGI NETWORK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: CLATHRIN TRISKELIONS, COMPOSED OF 3 HEAVY CHAINS AND 3 LIGHT CHAINS, ARE THE BASIC SUBUNITS OF THE CLATHRIN COAT. IN THE PRESENCE OF LIGHT CHAINS, HUB ASSEMBLY IS INFLUENCED BY BOTH THE PH AND THE CONCENTRATION OF CALCIUM.
SUBCELLULAR LOCATION: CYTOPLASMIC FACE OF COATED PITS AND VESICLES.

            SUBUNIT: HOMOCCTAMER.
SUBGELLULAR LOCATION: CYTOPLASMIC.
TISSUE SPECIFICITY: FOUND MAINLY IN THE CORTICAL TISSUES OF SEEDLING ROOTS, AND IN THE ROOT TIP.
SIMILARITY: BELONGS TO THE GLUTAMINE SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                            -> S (IN REF. 2).

```

ENTYME REGULATION: REQUIRES HIGH LEVELS OF PHOSPHATIDYLSERINE TO BE ACTIVATED. THE PRESENCE OF THE C2 DOMAIN LOWERS THE AFFINITY OF PROTEIN KINASE C ACTIVATORS FOR THE C1 DOMAINS AND THIS INHIBITION CAN BE REMOVED BY PHOSPHATIDILERINE. PHOSPHATIDIC ACID, HOWEVER, IS MUCH MORE POTENT THAN PHOSPHATIDYLSERINE IN REDUCING C2 DOMAIN MEDIATED INHIBITION, SUGGESTING THAT PHOSPHATIDIC ACID, MAY BE A SEQUIRED COFACTOR FOR THE ACTIVATION OF APL II.

SUBCELLULAR LOCATION: MEMORANG-ASSOCIATED.

-1- SIMILARITY: CONTAINS 2 ZINC-DEPENDENT PHORBOL-ESTER AND DAG

BINDING DOMAINS

-!- SIMILARITY: CONTAINS 1 C2 DOMAIN. -!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES. PKC SUBFAMILY.
